

Akuo Group has already invested more than one billion dollars in renewable energy infrastructure projects.

Paris, November 24, 2011: This morning, Akuo Energy acquired Broussan and Château, two solar farms with total installed capacity of 5.89 MW located in the *Gard* region of France. These two investments mark the symbolic threshold of one billion dollars of projects originated and structured by Akuo Energy.

Since its creation in 2008 the Akuo Group has sponsored the development, construction and acquisition of solar, wind and biomass farms for a total amount of one billion dollars. The majority of those projects were financed by Akuo Investment SICAR and other funds advised by Akuo Investment Management.

“Given the tough economic context during the past four years, we are very happy and proud to have achieved the group’s first financial milestone”, says Eric Scotto, CEO of Akuo Energy.

Akuo Energy, which is already operational in more than ten countries, has managed to have its portfolio of projects in development come to maturity, that is, to reach the construction stage.

Akuo Energy may therefore expect its development program to speed up within the three coming years, with an annual investment target of 700 million dollars, exclusively in green infrastructure.

About Akuo: Akuo Energy is a private French producer of electricity from renewable energy. It develops, finances, constructs and operates a range of electrical power plants.

With more than 70 team members, the group has a foothold in 10 countries: France, Italy, Poland, Croatia, Bulgaria, Turkey, Morocco and the United States.

Geographically, 50% of Akuo Energy’s activity is in Europe and Turkey, 30% in the United States, 20% is in South America.

About Akuo Investment Management (AIM): AIM is a global fund management and advisory group specializing in the creation of social and financial value through renewable energy investments.
